

Exercise 1:

Create a form design that will display the odd or even number

Code:

```
using System.Windows.Forms.Design;

namespace Week3_4
{
    public partial class Form1 : Form
    {
        public Form1()
        {
            InitializeComponent();

            private void btnCheck_Click(object sender, EventArgs e)
            {
                int number = Convert.ToInt32(txtNumber.Text);

                if (number % 2 == 0) {
                    lblResult.Text = "The number is even";
                } else {
                    lblResult.Text = "The number is odd";
                }
            }
        }
    }
}
```

Output:

Form1

Enter a number:

The number is even

Form1

Enter a number:

The number is odd

Exercise 2:

Create a form design that will display the negative or positive number

Code:

```
using System.Windows.Forms.Design;

namespace Week3_4
{
    public partial class Form1 : Form
    {
        public Form1()
        {
            InitializeComponent();

            private void btnCheck_Click(object sender, EventArgs e)
            {
                int number = Convert.ToInt32(txtNumber.Text);

                if (number >= 0) {
                    lblResult.Text = "The number is positive";
                } else {
                    lblResult.Text = "The number is negative";
                }
            }
        }
    }
}
```

Output:

Form1

Enter a number:

The number is positive

Form1

Enter a number:

The number is negative

Form1
